

GO! Connect Realtime Order & Label

GO! Connect combines the GO! logistics solutions with the shipping systems of our customers. In this way, shipment booking and tracking can be made even more efficient and shipment data can be retrieved more quickly.

Due to the modular structure of GO! Connect, companies can individually optimise their processes by integrating relevant interfaces. The modules are divided into the categories **Order Management** – with all relevant applications for placing orders – and **Tracking Solutions** – with all applications related to the topic of shipment tracking.

In addition to the Realtime Order & Label, customers can also use the Shipment Tracker and Shipment Report modules.

Like all other GO! Connect modules, GO! Connect Realtime Order & Label is constantly being optimised and developed further. Customers who use Shopware 5 will also benefit from a new, practical plug-in solution that connects GO! Connect directly to Shopware.

The advantages of the GO! Connect Realtime Order & Label at a glance

- shipment order and confirmation in real time using modern REST API technology
- automatic creation of a shipping label as ZPL and PDF
- high reliability and availability of the interface via cloud architecture
- can be used/integrated independently of the operating system and software used
- changing the order status
- changes to consignments that have not yet been released
- cancellation up to two hours before collection time
- free of charge for GO! customers
- free support and advice on questions about our GO! web services
- continuous optimisation and further development
