GO! Shopware plug-in

From now on, you can dispense with the multitude of different programs and applications on your PC that you constantly need to switch between just to commission a single shipment. Why not focus on your actual business, benefit from this digital work simplification tool and minimise your coordination inputs.

The GO! Shopware plug-in now enables you to utilise shipment commissioning 2.0 – it is faster, easier and more efficient. The plug-in can be easily installed in the relevant Shopware environment. Once integrated into the shipping process, web shop customers can be provided with an additional shipping option via GO! and shipments can in future be commissioned directly ex Shopware.

Required or full shipping data is stored in parallel in our ERP system and then processed quickly and reliably by us as shipping partner to ensure seamless shipment handling.

Once an order has been placed, a GO! shipping label is generated as an order acknowledgement, which is saved to the order as a PDF document. Any order that has been placed can also be cancelled if an error is made during the booking process.

The advantages of the GO! Shopware plug-in at a glance

- free-of-charge provision of the plug-in
- seamless integration in Shopware 5
- easy interface installation and configuration
- specification of pickup time slots for each weekday
- automatic booking of same-day pickups directly ex your Shopware environment
- ordering can be placed both automatically via order status change and manually
- shipping labels can be printed ex your Shopware environment
- shipping labels can be accessed directly from order summaries
- commissioning of multi-parcel shipments
- order-specific post-processing feasible within orders (e.g. for scheduled deliveries)
- orders can be cancelled up to two hours before scheduled pickup
